PROJECTS

Note2Quiz (Mobile Exam Preparation Assistant with Photo Upload)

Mobile Application | Flutter, Dart, Python, FLAN-T5, Flask, API Integration

- Developed the cross-platform mobile frontend using Flutter and Dart, designing an interface that converts physical study notes into interactive digital quizzes.
- Implemented responsive UI components and navigation flows to guide users through image upload, OCR processing, quiz generation, and results viewing.
- Designed a clean and intuitive user experience focused on minimizing friction between note capture and quiz interaction.

PawMatch (Web Application for Pet Adoption and Care)

HTML5, CSS3, JavaScript, Responsive Web Design

- Designed and implemented the frontend interface using HTML5, CSS3, and JavaScript, focusing on usability and accessibility across desktop and mobile devices.
- Built responsive layouts for pet profiles, image galleries, and adoption forms, ensuring consistent display across different screen sizes.
- Implemented client-side search and filtering features to help users quickly find pets based on specific criteria.

Automata Simulator (Automata Theory Web App)

Course Project | HTML/CSS (Tailwind CSS), JavaScript

- Built the interactive frontend, designing a responsive, developer-focused workspace with a cohesive dark-themed editor aesthetic, custom typography (Inter, Fira Code), and fluid layout transitions.
- Engineered a dynamic SVG-based graph visualization engine for DFA and PDA configurations, implementing custom bezier curves for overlapping transitions and boundary-aware coordinate layouts.
- Developed an interactive sequence validation matrix that supports batch testing, featuring step-by-step path tracing animations with live visual feedback on the state machine nodes.
